## **Neuroscientists Translate Brain Waves Into Recognizable Speech**

From Gizmodo:

“Using brain-scanning technology, artificial intelligence, and speech synthesizers, scientists have converted brain patterns into intelligible verbal speech—an advance that could eventually give voice to those without.

“It’s a shame Stephen Hawking isn’t alive to see this, as he may have gotten a real kick out of it. The new speech system, developed by researchers at the Neural Acoustic Processing Lab at Columbia University in New York City, is something the late physicist might have benefited from.”
